

Configuration

```
module.exports = {  
  // 1. Where to begin (input)  
  entry: PATHS.app,  
  // 4. Where to write (output)  
  output: {  
    path: PATHS.build,  
    filename: "app.js",  
  },  
  // 3. How to process modules  
  module: {  
    rules: [  
      {  
        test: /\.js$/,  
        use: "babel-loader",  
        exclude: /node_modules/,  
      },  
    ],  
  },  
  // 2. Additional processing to perform  
  plugins: [  
    new webpack.DefinePlugin(...),  
  ],  
  // How to resolve modules and loaders  
  resolve: {...},  
  resolveLoader: {...},  
};
```

Process

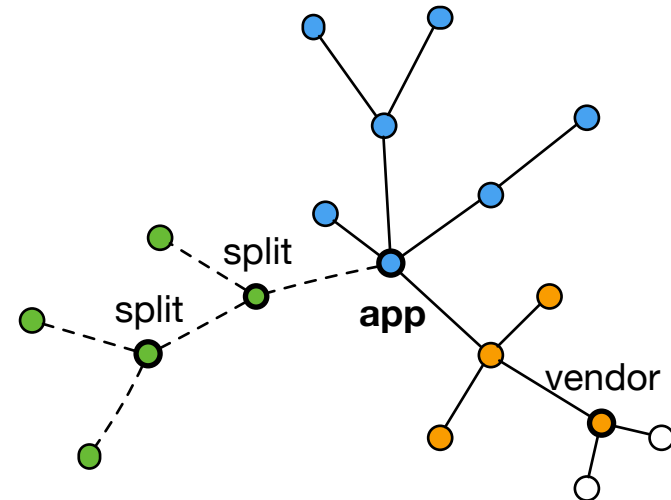

Code splitting

```
import(  
  /* webpackChunkName: "name" */  
  "./module"  
)  
.then(  
  module => {...}  
)  
.catch(  
  error => {...}  
);
```

Bundle splitting

```
optimization: {  
  splitChunks: {  
    cacheGroups: {  
      commons: {  
        test: /[\\/]node_modules[\\/]/,  
        name: "vendor",  
        chunks: "all",  
      },  
    },  
  },  
  runtimeChunk: {  
    name: "manifest",  
  },  
},
```

Bundle and code splitting

Loader processing
