## Learn to implement a Kanban board using Webpack and React

By reading this book you will learn to:

1. Set up a Webpack based development environment.

2. Improve the quality of your code by using ESLint and friends to spot mistakes earlier.

3. Get into the React mindset while learning the basics of Alt, an implementation of the Flux application architecture.

4. Style your React application in various emerging ways.

5. Implement drag and drop for your application using React DnD.

"SurviveJS connects the dots and fills the gaps left by the latest JavaScript tools and their documentation. With its detailed step-by-step tutorial approach, SurviveJS gives practical examples of code and configuration while providing context for choosing one method over another."

Steve Piercy

Juho Vepsäläinen has been dealing with the web since the 90s. He is behind jswiki, jster.net, and of course survivejs.com.
